Mission and Description

The DDG 51 Arleigh Burke Class Guided Missile Destroyer (DDG 51) is a multi-mission guided missile destroyer designed to operate offensively and defensively, independently, or as units of Carrier Strike Groups, Expeditionary Strike Groups, and Missile Defense Action Groups in multi-threat environments that include air, surface, and subsurface threats. These ships will respond to Low Intensity Conflict/Coastal and Littoral Offshore Warfare scenarios as well as open ocean conflict providing or augmenting power projection, forward presence requirements, and escort operations at sea. Flight IIA ships have introduced new capabilities, Cooperative Engagement Capability (CEC) and a MK-45 Gun that will provide improved air and anti-missile defense and improved land attack.

The DDG 51 Class ships provide outstanding combat capability and survivability characteristics while considering procurement and lifetime support costs. They feature extraordinary seakeeping and low observability characteristics.

The DDG 51 features the AEGIS Weapon System (AWS), which has quick reaction time, high firepower, and improved Electronic Countermeasures capability in Anti-Air Warfare (AAW). The ships' Anti-Submarine Warfare (ASW) System provides superior long range multi-target detection and engagement capability with two embarked Light Airborne Multi-Purpose System MK-III helicopters (Flight IIA, DDG 79 and follow-on ships). DDG 91 and follow-on ships employ the littoral variant SPY-1D(V). The Advanced Tomahawk Weapon Control System (DDGs 79-95) and the Tactical Tomahawk Weapons Control System (DDG 96 and follow-on ships) allow employment of multiple variants of Tomahawk missiles for strike warfare. The MK-45 gun weapon system provides significant capability for surface warfare, land attack, and air defense. The CEC is being installed on DDG 51 Class Ships to promote Network Centric Warfare capability. The AWS is the heart of an integrated combat system that provides area coverage and command/control focus in all dimensions of Naval Warfighting and Joint Military Operations: AAW; ASW; Anti-Surface Warfare; Command, Control, Communications, Computers & Intelligence; and Strike Warfare. DDG 113 and follow ships will provide Integrated Air and Missile Defense and work with other Ballistic Missile Defense assets.

Structural features are an all steel hull and deckhouse with vital spaces protected and located within the hull. The ship employs a gas turbine propulsion system with Controllable Pitch Propellers similar to the CG 47 class.

The DDG 51 Destroyer is being produced to fulfill a surface combatant requirement to provide air dominance, integrated air and missile defense, maritime dominance and land attack capability.

Executive Summary

The DDG 51 Program has successfully delivered 62 ships (DDG 51 - 112) since program inception in 1985. Subsequent to the restart of the program in 2009, annual, annual with option, or multi-year procurement contracts for 14 additional ships between FY 2010 – FY 2017 have been awarded.

The Navy has instituted several initiatives to reduce cost associated with FY 2010 and follow DDG 51 Class ships including the increased the use of competitive contracts in lieu of sole source contracts. Other cost savings initiatives include the use of Multi-Year Procurements (MYP) with Profit Related to Offer (PRO) concept, refurbished assets from retiring Navy ships and leveraging Government Furnished Equipment (GFE) contracts across multiple ship classes to obtain better prices across the Navy.

The Navy is currently developing the next baseline upgrade referred to as Flight III which will provide enhanced surface combatant Integrated Air Missile Defense (IAMD) capability. The upgrade will primarily consist of the integration of the SPY-6 radar, being developed by Raytheon, along with the necessary electrical power and cooling and ship stability modifications. Flight III will be introduced on a FY 2016 ship. Congress provided an additional \$1B in FY 2016 to support incremental funding for an additional DDG 51 Class ship.

The FY 2017 PB submission requests \$3,211.3M Full Funding for two ships in FY 2017, and \$16M Cost to Complete for the Government responsible portion for the shipbuilding construction contract overrun for DDG 115.

The DDG 51 Class Program has achieved the following significant production milestones since the last report:

- DDG 119 (DELBERT BLACK) Start Fabrication completed on July 6, 2015 in Pascagoula, MS.
- DDG 118 (DANIEL INOUYE) Start Fabrication completed on August 2, 2015 in Bath, ME.
- DDG 113 (JOHN FINN) AEGIS Light Off conducted on September 7, 2015 in Pascagoula, MS.
- DDG 117 (PAUL IGNATIUS) Lay Keel completed on September 11, 2015 in Pascagoula, MS.
- DDG 115 (RAFAEL PERALTA) Launch completed on November 1, 2015 in Bath, ME.
- DDG 116 (THOMAS HUDNER) Lay Keel completed on November 6, 2015 in Bath, ME.
- DDG 114 (RALPH JOHNSON) Launch completed on December 12, 2015 in Pascagoula, MS.
- DDG 115 (RAFAEL PERALTA) AEGIS Light Off conducted on December 17, 2015 in Bath, ME.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for contracts included in this SAR are For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

There are no significant software-related issues with this program at this time.

Explanation of Breach

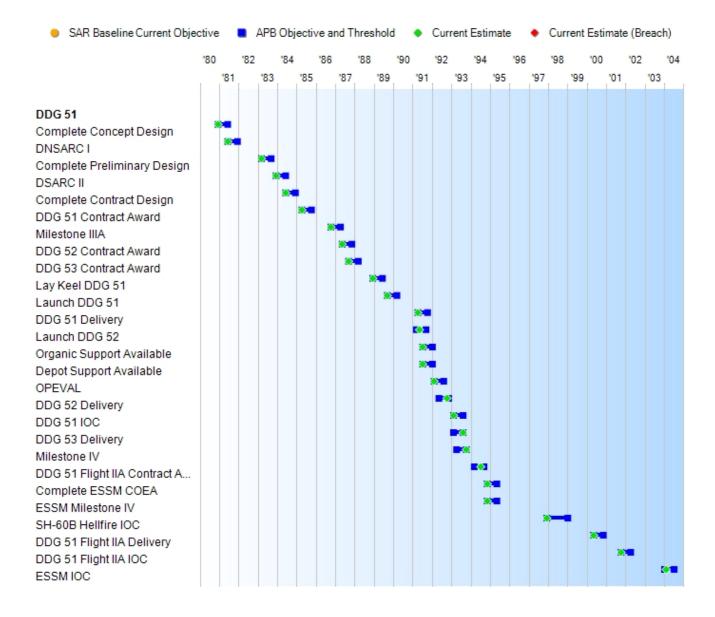

RDT&E Cost Breach is due to increased development and integration costs associated with the introduction of new Standard Missile-6 Block (BLK) IA and Naval Integrated Fire Control - Counter Air (NIFCCA) 2019 warfighting capabilities into AEGIS Advanced Capability Build (ACB) 16, and development and integration of NIFC-CA 2019, Ballistic Missile Defense improved threat set, Surface Electronic Warfare Improvement Program BLK II, and Combat ID warfighting capabilities into AEGIS ACB 20.

Procurement Cost Breach is due to the increase in ship quantities from approved APB to current estimate (86 ships vice 75 ships). The 2015 SAR adds 4 additional ships (2 in FY 2021 and 2 in FY 2022).

O&S Cost Breach due to increase in ship quantity from last approved APB to current estimate (86 vice 75 ships) and corrected service life per unit calculations for FLT IIA and FLT III (increase of 5 years from 35 to 40 for FLT IIA/FLT III ships). The 2012 SAR added 2 ships (FY 2018), the 2013 SAR added 3 ships (1 in FY 2016 and 2 in FY 2019), the 2014 SAR added 2 ships (FY 2020), and the 2015 SAR adds 4 additional ships (FY 2021 and FY 2022).

Updated Program Deviation Report and APB are in process.

ORD dated April 15, 1994

Change Explanations

(Ch-1) The current estimate for Length has changed from "see change explanations" to "Baseline Dependent". As noted in the 2014 SAR, the production estimate, demonstrated performance, and current estimate for length at waterline for FLT I and FLT II are 466. Demonstrated performance and current estimate for length at waterline for FLT IIA and FLT III is 471. Demonstrated performance and current estimate for FLT IIA length overall is 509. Current estimate for FLT III length overall is 509.

Notes

Demonstrated Performance and Current Estimate are for the FLT IIA configuration except for Radars that have inputs for FLT IIA and FLT III ships. Production Estimates are from the FLT II configuration. Demonstrated Performance characteristics reflect testing through the TEMP 801-OT-IIIH report dated July 20, 2006. SM-3 Block IA Demonstrated Performance is reflected in FTM-15, approved April 14, 2011.

Low Rate Initial Production

| Item | Initial LRIP Decision | Current Total LRIP |
|-------------------|--|--|
| Approval Date | 10/30/1986 | 10/30/1986 |
| Approved Quantity | 9 | 9 |
| Reference | Milestone IIIA Review Decision Memorandum | Milestone IIIA Review Decision Memorandum |
| Start Year | 1985 | 1985 |
| End Year | 1989 | 1989 |

The Current Total LRIP Quantity is more than 10% of the total production quantity due to the Milestone IIIA Review Decision Memorandum dated October 30, 1986, approving 9 LRIP ships which is standard for ship building programs.

Foreign Military Sales

| Country | Date of Sale | Quantity | Total Cost \$M | Description |
|-------------|--------------|----------|-------------------|---------------------------------------|
| Japan | 10/30/2015 | 121 | 5856.0 | Date cited is date of last case sale. |
| South Korea | 10/27/2015 | 14 | 2994.0 | Date cited is date of last case sale. |
| Australia | 5/22/2014 | 6 | 1225.0 | Date cited is date of last case sale. |
| Norway | 7/18/2012 | 10 | 344.0 | Date cited is date of last case sale. |
| Spain | 8/11/2006 | 7 | 1285.0 | Date cited is date of last case sale. |

Notes

Quantity numbers above reflect FMS cases, rather than ships. Cases are agreements between the United States and an eligible foreign country to provide defense articles, training, and/or services for purchase. Cases can be related to procurements (e.g., Ordalt or standard missile), training (e.g., AEGIS shipboard training or replacement crew training), and program management support (e.g., Combat System Ship Qualification Test). Case quantity numbers reflect all cases; open and closed.

Nuclear Costs

| Item | Cost Variance | Schedule Variance | | | | |

Cumulative Variances To Date (12/31/2015)

Previous Cumulative Variances

Net Change

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to an increase in manufacturing hours caused by a loss of learning from the production gap and new management in the hull shops. Hull shops are complete and cost performance continues to improve across the rest of the manufacturing pool. Performance has improved across manufacturing and is forecasted to continue until delivery.

The unfavorable net change in the schedule variance is due to hull shops loss of learning and additional re-work associated with coatings. DDG 113 has improved on its schedule overall and plans to deliver DDG 113 by the contract delivery date.

Notes

DDG 113 (FY 2010 ship) was a sole source annual procurement awarded to HII on June 15, 2011.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

| Item | Cost Variance | Schedule Variance | | | | |

Cumulative Variances To Date (12/31/2015)

Previous Cumulative Variances

Net Change

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to an increase in manufacturing hours caused by a loss of learning from the production gap, new management in the hull shops, and a Performance Measurement Baseline (PMB) with a lower Target Cost than the previous DDG (DDG 113). Hull shops are now 100% complete and cost performance continues to improve across the rest of the manufacturing pool. Despite the poor cost performance, significant learning can be seen from DDG 113. Performance has improved across manufacturing and is forecasted to continue until delivery.

The unfavorable net change in the schedule variance is due to electrical hookup falling behind from pulling class-4 cable. HII plans to deliver DDG 114 one month before the contract delivery date.

Notes

The DDG 114 (one of two FY 2011 ships) was a competitively bid annual procurement awarded to Ingalls on September 26, 2011.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

Net Change

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to an increase in manufacturing hours caused by a loss of learning from the production gap and new management in the hull shops. DDG 117's cost performance continues to be better than DDG 114.

The unfavorable net change in the schedule variance is due to loss of learning causing late products affecting the schedule. DDG 117's planned Launch date is January 17, 2017. DDG 117 is planned to deliver before the contract date.

Notes

DDG 117 (one of three FY 2013 ships) is part of the FY 2013 - FY 2017 Multi Year Procurement awarded on June 3, 2013.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

| Item | Cost Variance | Schedule Variance | |

Cumulative Variances To Date (12/31/2015)

Previous Cumulative Variances

Net Change

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to delayed products coming out of fabrication shops.

The unfavorable net change in the schedule variance is due to the late start of construction, more than 10 months beyond the Performance Measurement Baseline (PMB) date. The late start of construction is attributed to the impacts of yard-wide workload and manning.

Notes

DDG 118 (one of three FY 2013 ships) is part of the FY 2013 - FY 2017 Multi Year Procurement awarded on June 3, 2013.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

Cumulative Variances To Date (12/31/2015)

Previous Cumulative Variances

Net Change

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to hull shop performance not meeting planned targets, though trends show improvement from previous hulls under construction.

The favorable net change in the schedule variance is due to material budget time-phasing at this early stage of production. DDG 119's planned Lay Keel date of May 6, 2016 is achievable and DDG 119 is expected to deliver prior to contract delivery date.

Notes

DDG 119 (FY 2014 ship) is part of the FY 2013 - 2017 Multiyear Procurement awarded on June 3, 2013.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to negotiated changes to the contract.

Net Change

Cost and Schedule Variance Explanations

The unfavorable cumulative cost variance is due to material budget time-phasing at this early stage of production.

The unfavorable cumulative schedule variance is due to material budget time-phasing at this early stage of production.

Notes

DDG 121 (FY 2015 ship) is part of the FY 2013 - 2017 Multiyear Procurement awarded on June 3, 2013.

Current Contract Price (\$M), Estimated Price at Completion (\$M) and Cost and Schedule Variance for this contract is For Official Use Only - Exempt from FOIA release under 5 U.S.C. 552(b)(4).

Operating and Support Cost

Cost Estimate Details

Date of Estimate: February 03, 2016

Source of Estimate: POE
Quantity to Sustain: 86
Unit of Measure: Ship

Service Life per Unit: 40.00 Years

Fiscal Years in Service: FY 1992 - FY 2068

The total ship quantity is 86 ships. Estimates are based on a service life of 35 years for the 28 Flight I and Flight II ships and 40 years for the 58 Flight IIA and Flight III ships.

Sustainment Strategy

DDG 51 Hull, Mechanical & Electrical equipment sustainment approach is by use of Multi Ship/Multi Option contracting strategy for repairs and overhauls. The program provides Integrated Logistics Support oversight and guidance to Participating Acquisition Resource Managers that develop various sustainment approaches for combat systems and Communications, Command, Control, Computers, and Intelligence.

Manpower optimization initiatives have been sought to leverage new technology and reduce costs. Reductions have been achieved across all DDG 51 Class Flights. For example, initial Flight IIA Billet Allotment was 333 officers and enlisted personnel. Policies have been implemented and new technologies deployed to reduce billets by 35 to 298, as reflected in the Ship Manpower Document, dated September 2011, for Flight IIA (DDG 103-110).

Antecedent Information

The Antecedent System is the CG 47 class of ships. The CG 47 class was used since it is the only other ship class with the AEGIS Weapon System installed. The CG 47 estimates were derived using the Naval Visibility And Management of Operating and Support Costs (VAMOSC) database. CG 47 estimates are based on 27 ships, 22 with a service life of 35 years and five with service life between 18-21 years. The years of data used for the CG 47 class are FY 2010 - FY 2015.

| Annual O&S Costs BY1987 \$M | | | | | | |
|--------------------------------|--|--|--|--|--|--|
| Cost Element | DDG 51 Average Annual Cost Per Ship | CG 47 (Antecedent) Average Annual Cost Per Ship | | | | |
| Unit-Level Manpower | 12.896 | 11.480 | | | | |
| Unit Operations | 7.016 | 4.747 | | | | |
| Maintenance | 3.491 | 11.686 | | | | |
| Sustaining Support | 0.930 | 0.945 | | | | |
| Continuing System Improvements | 2.870 | 3.248 | | | | |
| Indirect Support | 5.844 | 9.778 | | | | |
| Other | 0.000 | 0.000 | | | | |
| Total | 33.047 | 41.884 | | | | |

| | | Total O&S | Cost \$M | |
|-----------|---|-----------|-----------------------|--------------------|
| Item | DDG | 51 | | |
| ite | Current Production APB Objective/Threshold | | Current Estimate | CG 47 (Antecedent) |
| Base Year | 84945.0 | 93439.5 | 109032.0 ¹ | 34865.8 |
| Then Year | 177651.0 | N/A | 314558.3 | N/A |

O&S Cost Breach is due to the increase in ship quantity from last approved APB to current estimate (75 ships vice 86 ships) and corrected service life per unit calculations for Flight IIA and Flight III (increase of 5 years from 35 to 40 for Flight IIA/Flight III ships). Change from last APB is a total of 11 ships (2 ships added in 2012 SAR, 3 ships in 2013 SAR, 2 ships in 2014 SAR, and 4 new ships in 2015 SAR).

Equation to Translate Annual Cost to Total Cost

DDG 51

1 APR O&S Cost Breach

 $(\$33.047M \times 28 \text{ ships } \times 35 \text{ years}) + (\$33.047M \times 58 \text{ ships } \times 40 \text{ years}) = \$109,032M$

CG 47

 $($41.884M \times 22 \text{ ships x } 35 \text{ years}) + ($41.884M \times 1 \text{ ship x } 21 \text{ years}) + ($41.884M \times 2 \text{ ships x } 20 \text{ years}) + ($41.884M \times 1 \text{ ship x } 19 \text{ years}) + ($41.884M \times 1 \text{ ship x } 18 \text{ years}) = $34,865.8M$

| O&S Cost Variance | | | | | | |

Disposal Estimate Details

Date of Estimate:February 03, 2016Source of Estimate:NAVSEA 05C

Disposal/Demilitarization Total Cost (BY 1987 \$M): Total costs for disposal of all Ship are 452.4

The DDG 51 Class remains in full rate production and continues to be updgraded in new construction. The oldest of the class are approaching mid service life now and many are being upgraded with newer technologies which will inevitably change the cost of inactivation and disposal for the class.
